Abstracts

Mineral grease is lubricating oil derived from petroleum distillates which contain mineral additives imparting additional properties useful under extreme stressful conditions subjecting machinery to intense loads. Common uses span applications within heavy industries deploying large plant infrastructure exposed to severe weather conditions in harsh environments characterized by high ambient temperatures and humidity levels combined with exposure to corrosion caused by acid rain. The global mineral grease market is expected to grow at a moderate pace during the forecast period. Some major factors driving growth include increasing demand for mineral greases from various end-use industries such as automotive, industrial machinery, and construction. The main challenge facing the market is the availability of substitutes that offer similar performance characteristics but at a lower cost. However, mineral greases continue to be preferred by consumers due to their excellent stability under adverse environmental conditions and compatibility with other chemicals used in industry processes.

The global Mineral Grease market size was estimated at USD 6063.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.50% during the forecast period.
