### Report Overview:

Mineral insulated RTD cables are used in combination with a thin film or wirewound ceramic resistor Pt100 element. The principle of an RTD is that resistance value changes as its temperature changes. RTD pt100 sensors are used to measure temperatures extremely accurate in a certain set temperature range. This range can vary from -200° C to + 850° C. Since the resistors are very delicate, they are often placed in a mineral insulated RTD cable to ensure protection and stability.

The Global Mineral Insulated Cables for RTDs Market Size was estimated at USD 78.18 million in 2023 and is projected to reach USD 101.81 million by 2029, exhibiting a CAGR of 4.50% during the forecast period.
