Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mineral Mycotoxin Adsorbent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mineral mycotoxin adsorbents are a type of functional additive that uses natural minerals as the main raw materials and fixes mycotoxins through physical adsorption and ion exchange. Its core components include aluminosilicate minerals such as montmorillonite, bentonite, and zeolite. This type of adsorbent uses the porous structure, high specific surface area, and exchangeable ions (such as Na⁺, Ca²⁺) on the surface of the mineral to electrostatically adsorb, van der Waals force binding, or ion exchange reactions with toxin molecules (such as aflatoxin and zearalenone), thereby reducing the bioavailability of toxins in the animal digestive tract and reducing their toxic damage to the liver, immune system, and reproductive system. It is widely used in the field of feed mold prevention to ensure animal health and food safety.

The global Mineral Mycotoxin Adsorbent market size was estimated at USD 319.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
