### Report Overview

Mineral seal oil is a specialized petroleum distillate primarily used as a solvent, carrier fluid, or lubricant in industrial applications, including the manufacturing of insecticides, adhesives, and coatings. It is derived from the refining of crude oil and possesses properties such as low volatility, high solvency power, and chemical stability, making it suitable for applications requiring consistent performance under varying conditions. The product is distinct from other mineral oils due to its refined purity and controlled viscosity, often meeting stringent industry specifications. Demand for mineral seal oil is closely tied to industrial production, particularly in sectors like agriculture (for pesticide formulations), construction (for sealants), and automotive (for specialty lubricants). Its market dynamics are influenced by crude oil prices, regulatory standards on chemical formulations, and shifts toward bio-based alternatives in certain applications.
