Abstracts

Minerals thickening agents are naturally derived or synthetically processed mineral-based substances, such as clays (e.g., bentonite, hectorite), silicates, and various colloidal minerals, which are utilized to increase the viscosity, stability, and textural properties of liquid or semi-solid formulations across diverse industrial and consumer applications. These agents function by forming three-dimensional networks or through particle interactions that trap water or other solvents, thereby modifying rheological behavior to achieve desired consistency, suspension of solids, or controlled flow characteristics.

The global Minerals Thickening Agents market size was estimated at USD 582.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
