Abstracts

Mini recirculating chillers are compact, closed-loop cooling systems designed to maintain precise temperatures for industrial and laboratory equipment by continuously circulating a coolant through an external heat-generating device, then returning it to the unit where it is cooled via a refrigeration cycle before being recirculated. These systems are distinguished from open-loop cooling methods by their efficiency, reduced water consumption, and ability to provide stable temperature control in applications such as laser cooling, medical imaging, semiconductor manufacturing, analytical instrumentation, and small-scale industrial processes where heat dissipation must be managed accurately and reliably.
