Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Miniature Infrared Thermal Imaging Module competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A miniature infrared thermal imaging module is a compact device that detects infrared radiation emitted by objects and converts heat into electrical signals using sensitive materials such as microbolometers, ultimately generating a visible image of temperature distribution. This module can operate at room temperature without cryogenic cooling and features small size, low cost, low power consumption, and easy integration. It enables non-contact temperature measurement and night vision imaging, and is widely used in consumer electronics, security monitoring, industrial inspection, and automotive driver assistance systems. In 2024, the global average price of a miniature infrared thermal imaging module was \$2,100 per unit, with annual sales of approximately 691,200 units. Global single-line annual production capacity was around 5,000-6,000 units, and the industry average profit margin was 15%-25%. Upstream: The core link is the manufacturing of infrared detector chips, involving MEMS wafer production and the supply of infrared sensitive materials such as vanadium oxide and mercury cadmium telluride. Key components also include the processing of infrared optical lenses (such as germanium lenses). Downstream: Applications are wide-ranging, covering both military (e.g., infrared guidance, night vision equipment) and civilian markets. Civilian applications mainly include industrial inspection (power line inspection, predictive maintenance of equipment), security monitoring, automotive ADAS, medical and health (such as body temperature screening), and consumer electronics (such as smartphone integration, outdoor exploration equipment), etc.

The global Miniature Infrared Thermal Imaging Module market size was estimated at

USD 1452.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
