Report Overview:

Minimally invasive bariatric surgery is called "laparoscopic gastric bypass surgery", which is a surgery that changes the structure of the intestine and closes most of the stomach's functions. Its characteristics are: the operation divides the gastrointestinal tract into upper and lower parts, the smaller upper part and the larger lower part, then cuts the small intestine, rearranges the position of the small intestine, changes the way food passes through the digestive tract, slows the rate of gastric emptying, and shortens the small intestine. By controlling intake and reducing absorption, we can achieve both weight loss and diabetes control.
