## Abstracts

A Minimum Viable Product (MVP) has the bare minimum features ready to launch in the market and attract early adopters. But, rather than only expediting an app's time-to-market, MVP apps are an important stage for app development. By gaining insights and feedback on an app from early adopters, MVP apps are a vital stage in the app development process. They also allow developers to learn from initial versions and use insights to optimize app development. A term first coined by Frank Robinson, 'Minimum Viable Product' became more popular by Eric Ries, the founder of the Lean Startup methodology. According to Ries, an MVP is the version of a new product that allows a team to gather the maximum amount of proven customer knowledge with the least amount of effort. An MVP is also a vital stage in Agile app development and in particular Scrum.

The global Minimum Viable Product Mvp Development market size was estimated at USD 315.31 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
