Abstracts

The Mining Collision Avoidance System is a safety technology system designed specifically for mining operations. It aims to reduce the risk of collisions between equipment, vehicles and personnel in mines through real-time monitoring and data analysis. The system integrates a variety of sensors and monitoring equipment, such as radar, LiDAR, cameras, ultrasonic sensors and GPS positioning systems, which can collect environmental data in real time and analyze potential collision risks. Through dynamic monitoring of various types of equipment, vehicles and personnel in the mining area, when the system detects the danger of an impending collision, it will immediately sound an alarm or automatically take measures, such as slowing down, stopping, turning or parking, thereby effectively preventing accidents. The mining collision avoidance system not only improves the safety of mining operations, but also reduces equipment damage, improves work efficiency, and protects the lives of operators.

The global Mining Collision Avoidance System market size was estimated at USD 1865.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
