Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mining Equipment Wheels competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Mining Equipment Wheels production reached approximately 142 k units, with an average global market price of around US\$ 37,000 per unit. Mining equipment wheels are essential components of heavy-duty mining equipment. They are designed to withstand the harsh conditions of mining operations, including extreme temperatures, heavy loads, and constant wear and tear. The primary raw material is rubber, synthesized from petrochemicals such as butadiene and styrene. Its price is linked to international crude oil prices. Steel cord: The tire's "skeleton," providing strength and rigidity. Made from high-grade steel wire, it is supplied by major steel companies such as Bekaert and Shougang. A reinforcing agent derived from petroleum or coal tar, it enhances tire wear resistance and lifespan. Its production is inherently energy-intensive. Hundreds of specialized chemicals, including vulcanizers, accelerators, and antioxidants, are used to improve the rubber's processing performance and the physical and chemical properties of the final product. Downstream players include original equipment manufacturers (OEMs) and mining companies. OEMs are mining truck manufacturers such as Caterpillar, Komatsu, Hitachi Construction Machinery, and BelAZ. Tires are a key component for these companies. They often establish strategic partnerships or long-term supply agreements with tire giants to equip newly manufactured mining trucks with tires (the original equipment market). Mining companies are their core customers and source of demand. Including BHP Billiton, Rio Tinto, Vale, Glencore, China National Energy Group, Shenhua Group and other large global mining and coal companies. The construction of electric vehicles, energy storage systems, and wind and solar power plants requires vast quantities of metals such as

copper, lithium, cobalt, and nickel. This has spurred investment in new mines and expansion of existing mines, directly driving demand for large-scale mining equipment and tires. Globally, especially in developing countries, infrastructure construction requires vast quantities of steel and coal, supporting the mining of iron ore and coal. Thousands of large mining trucks are in continuous operation worldwide. Even as new equipment sales slow, these existing vehicles require regular tire replacements, creating a large and stable aftermarket.

The global Mining Equipment Wheels market size was estimated at USD 5267.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
