Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mining Grouting competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of mining grouting reached 1.85 million tons, with an average selling price of \$420 per ton. Mining grouting is a highly fluid material system used for tunnel reinforcement, coal seam grouting to prevent outbursts, shaft water blocking, and foundation stabilization. Cement-, chemical-, or polymer-based formulations are often used to improve the safety and anti-seepage properties of mine structures. Upstream raw materials include cement, bentonite, chemical grouting agents, and additives. Major suppliers include Holcim, Sika, Mapei, China National Building Materials, and Southern Cement. Downstream customers are concentrated in the coal mining, metal mining, and tunnel engineering sectors, with representative companies including China Shenhua, Rio Tinto, Vale, and China Railway Tunnel Engineering Group. Major global manufacturers have a total production capacity of approximately 2.1 million tons, with an average gross profit margin of 22%-28%. Coal mine support and waterproofing grouting accounts for approximately 46% of downstream consumption, metal mine stabilization accounts for approximately 33%, and the remainder is used in tunnels and underground gas storage facilities. Future development trends will focus on environmentally friendly, fast-setting, and nano-enhanced grouting materials.

The global Mining Grouting market size was estimated at USD 777.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
