## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mining Pressure Gauge competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Mining Pressure Gauge was approximately 4.6 million units, with an average selling price of about US\$72 per unit. Single-line production capacity was approximately 50,000 units per year, with an average gross profit margin of about 25%. Mining Pressure Gauge is pressure measuring instruments specifically designed for the harsh environment of underground coal mines. They are primarily used to measure the pressure and peak values of fully mechanized mining equipment under conditions of high pulse pressure and severe impact, and are characterized by their small size, high accuracy, shock resistance, impact resistance, and ability to memorize maximum values. These instruments provide crucial information for mine support design, quality monitoring, and safety forecasting. Upstream core raw materials and components include metal materials, elastic elements, mechanisms, dials, pointers, seals, and filling fluids. Downstream applications are mainly in coal mining, metal and non-metal mines, and tunnel engineering, specifically for monitoring the pressure status of critical equipment such as hydraulic supports, ventilation systems, drainage pumping stations, gas extraction, and compressed air pipelines. They are essential instruments for ensuring safe production and efficient operation in mines.

The global Mining Pressure Gauge market size was estimated at USD 331.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
