## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mining Roadheaders competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mining Roadheaders are heavy machinery used for excavating underground mine tunnels. They use cutting heads, hydraulic drives or picks to break rock layers to achieve efficient and safe tunneling. They are mainly divided into two categories: full-face tunnel boring machines (TBMs) and partial-face tunnel boring machines, which are suitable for coal mines, metal mines and tunnel projects. Their core advantages are high degree of automation and good dust control, which can reduce the risk of manual blasting and improve mining efficiency by 30%-50%.

The global Mining Roadheaders market size was estimated at USD 4513.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
