## Abstracts

Mining SCADA Software is a centralized monitoring and management system integrated into the core of mine production. Through various sensors, instruments, and programmable controllers deployed at the mining site, it collects key information such as equipment operating status, environmental parameters, and production data in real time, and transmits it to a central monitoring center via an industrial network. The software's core function is to dynamically display the entire mine's production landscape using a graphical human-machine interface, enabling operators to remotely monitor and control distributed equipment, achieving centralized scheduling and automated operations. At the same time, it possesses powerful data management and analysis capabilities. By recording historical data, generating alarms, and outputting reports, it provides managers with a basis for decision-making to optimize production processes, prevent failures, ensure safety, and improve resource utilization efficiency. Its ultimate goal is to ensure the safety, efficiency, and intelligence of mining operations, making it an indispensable foundational platform for building a "digital mine."

The global Mining SCADA Software market size was estimated at USD 83.13 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
