Abstracts

Mining Wireless Monitoring Solution refers to complete systems that utilize communication technologies such as LoRa, NB-IoT, Wi-Fi 6, 5G-MESH, and UWB to achieve real-time acquisition, transmission, and analysis of parameters related to mine geological pressure, gas concentration, equipment vibration, personnel positioning, vehicle operation, slope stability, and tailings dam safety. These systems typically consist of wireless sensor nodes, smart gateways, accelerometers, pressure/gas sensors, personnel positioning tags, data acquisition servers, and cloud platforms. They can achieve minute-level or even second-level early warning outputs, with monitoring errors generally below 2%. Their applications cover metal mines, non-metal mines, open-pit mines, underground mines, and tailings dams, aiming to reduce mining accident risks, improve equipment utilization, and support the construction of digital mines. As mining companies increasingly demand unmanned and minimally manned operations, wireless monitoring is gradually replacing wired monitoring, becoming one of the important infrastructures for global mine automation.

The global Mining Wireless Monitoring Solution market size was estimated at USD 468.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
