MIS is the latest technology touted with the potential to replace traditional Lead-frame packages and BGA substrates. The use of build-up technology and breakaway from the conventional polymer core enables MIS technology to produce ultra fine-line/space capabilities. Molded Interconnect Substrate (MIS) can be seen as a kind of pre-mold lead frame or coreless substrate, it can compatible with QFN,LGA ,BGA ,SIP packages and applicable widely in IC packaging Process such as WB,FC and SMT. Currently the key players of MIS Substrates include Taiwanese PPT, Chinese MiSpak Technology and Malaysian QDOS. PPT now can supply 1 layer, 2 layer, 3 layer, 4 layer and 6 layer MIS substrates. MiSpak Technology supplies 1 layer and 2 layer MIS substrates. QDOS supplies 1 layer, 2 layer and 3 layer MIS substrates. The growth potential of MIS products in the substrate application market will come from network communication products such as servers and data centers, automotive electronic control equipment driven by electric vehicles and automotive intelligence, as well as 5G, AIoT and other applications. With the launch of these related products, the requirements for substrates used in semiconductor packaging will also increase significantly, requiring a high degree of design flexibility, improved performance and high reliability. In terms of advanced lead frame products, MIS manufacturers (PPT, MiSpak and QDOS) mainly supply products that are not limited to single-layer boards. PPT can also provide multi-layer board windable lead frame products for multi-chip packaging, which are products that are difficult for traditional lead frame suppliers to provide. Currently the MIS substrates are mainly used in power/PMIC/analog, automotive electronics, RF/5G, Optical Image Stabilization (OIS), fingerprint recognition, third generation semiconductor, and LED, etc. Most of MIS substrates are used in power segment. For third generation semiconductor, MIS substrates are mainly used in GaN devices.

The global MIS Substrate market size was estimated at USD 98.0 million in 2025 and is

projected to grow at a compound annual growth rate (CAGR) of 12.20% during the forecast period.
