### Report Overview:

Mixed or merged reality is defined as the blending of the physical and digital worlds. In layman's terms, it's what happens when virtual and augmented reality have a baby. Ideally, you'd put on a headset that could map your position as well as everything in the room and from that, overlay a hologram onto the physical world that would acknowledge the real-world boundaries of a coffee table or couch. A true MR headset would support both this kind of augmented reality and the closed world of virtual reality.
