Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mixed-Signal IC Test System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Mixed-Signal IC Test System production reached approximately 1,441 units, with an average global market price of around 1.85 M USD/units. A Mixed-Signal IC Test System is an automated semiconductor test platform designed to verify the electrical performance, functionality, and reliability of integrated circuits that combine both analog and digital circuitry on the same chip. These systems generate and measure a wide range of signals—such as voltage, current, frequency, timing, and digital logic states—to test devices including power management ICs, sensors, data converters, RF-lite chips, automotive ICs, and mixed-signal SoCs. Deployed primarily in wafer sort and final test stages at IDMs and OSATs, mixed-signal testers integrate precision instrumentation, high-speed digital channels, software test programs, and device-specific load boards to ensure each chip meets electrical and functional specifications before shipment. Demand for mixed-signal IC test systems is being driven by the rapid growth of automotive electronics, electric vehicles, power management, industrial automation, and sensor-based applications, all of which rely heavily on analog-digital integration. As IC complexity increases and test requirements expand to include higher voltages, tighter accuracy, and multi-physics validation, manufacturers are upgrading to higher-performance, higher-ASP test platforms. This creates strong business opportunities not only in traditional semiconductor hubs but also in emerging regions pursuing localized chip manufacturing. Opportunities are especially attractive in automotive-grade and power-device testing, where qualification standards are strict and test content per device continues to rise, supporting long-term equipment demand and recurring software and service revenue for test system

suppliers.

The global Mixed-Signal IC Test System market size was estimated at USD 2666.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
