Abstracts

Mixture of Experts (MoE) models represents a significant breakthrough in machine learning, offering an efficient approach to handling large-scale models. Unlike dense models, where all parameters are active during inference, MoE models activate only a fraction of their parameters. This approach balances computational efficiency with scalability, making MoE models highly attractive for various use cases. MoE models achieve efficiency by activating fewer parameters while maintaining a larger total parameter count. This design introduces unique trade-offs, including increased architectural complexity, but it provides greater flexibility for developers and researchers.

The global Mixture of Experts (MoE) Model market size was estimated at USD 470.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 30.50% during the forecast period.
