Report Overview

MLCC Ceramic Powder is a specific forming technique for ceramics. It is a process in which ceramic granular materials are made cohesive through mechanical densification, involving (hot pressing) or not (cold forming) temperature exposition. The process permits an efficient production of parts ranging widely in size and shape to close tolerances with low drying shrinkage. Traditional (for instance: ceramic tiles, porcelain products) and structural (for instance: chip carriers, spark plugs, cutting tools) ceramics are produced. Cold compaction of ceramic powders ends up with the realization of the so-called green piece, which is later subject to sintering.

The global MLCC Ceramic Powder market size was estimated at USD 4012 million in 2023 and is projected to reach USD 10430.47 million by 2032, exhibiting a CAGR of 11.20% during the forecast period.

North America MLCC Ceramic Powder market size was estimated at USD 1255.77 million in 2023, at a CAGR of 9.60% during the forecast period of 2024 through 2032.
