Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on MLCC Paste competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. MLCC paste is primarily used for the inner and outer electrodes of capacitors. Electrode paste is one of the primary raw materials for MLCCs and consists primarily of metal powder, glass phase, and an organic carrier. As the global electronics industry continues to evolve toward miniaturization, high reliability, and high frequency, the performance upgrades of MLCCs, core passive components, are increasingly dependent on breakthroughs in upstream paste materials. As a key material for the internal and terminal electrodes of MLCCs, conductive paste not only determines the capacitor's conductivity, sintering compatibility, and long-term stability, but also directly impacts product yield and overall reliability. In this high-precision, high-barrier material field, a group of global leading manufacturers are building solid technological and industry chain advantages. Japanese companies such as Shoen Chemical, Sumitomo Metal Mining, Daiken Chemical, Namics, and Noritake, leveraging their long-standing expertise in electronic ceramics and functional materials, have become core paste suppliers to international high-end MLCC manufacturers. In the Chinese market, with the rapid rise of the domestic MLCC industry chain, local material companies are also experiencing rapid growth. Representative companies such as Shandong Sinocera, Guangdong Fenghua, Grikin, and Dalian Overseas Huasheng Electronics Technology have achieved key technological breakthroughs in Ni-based internal electrode paste and Ag-based terminal electrode materials, gradually narrowing the technological gap with overseas giants and breaking down some bottlenecks. Driven by policy initiatives, domestic substitution, and downstream high-end electronics applications, the MLCC slurry market is accelerating toward a new phase of technological upgrading and supply chain reshaping. Companies

that master core technologies such as high-purity metal powder preparation, slurry dispersion uniformity control, and sintering shrinkage curve matching will continue to dominate the future competitive landscape in this sector.

The global MLCC Paste market size was estimated at USD 1815.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global MLCC Paste market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
