## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on MMC Connector competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. MMC (Metal Matrix Composite) connectors are high-performance electronic connectors made of metal (e.g., aluminum, copper) matrix reinforced with ceramics/carbon fibers via powder metallurgy or melt infiltration. They combine metal-like conductivity (resistivity 500MPa), arc erosion resistance ( $10^5$  mating cycles), and EMI shielding (>90dB). Ideal for EV high-voltage systems (battery/motor links), aerospace, and 5G power modules, they reduce weight by 30% and enhance heat dissipation versus plastic connectors, though at 3-5x higher manufacturing costs. The MMC connector market is fueled by NEVs (800V platforms) and defense needs, with Europe firms (TE Connectivity, Amphenol) leading high-end sectors, while Chinese players advance via material innovations (e.g., low-cost Al-SiC composites). Key trends: 1) Nano-coatings (e.g., DLC) for contact durability; 2) Modular designs (quick-connect high-voltage interfaces); 3) Recyclable materials to reduce carbon footprint. Challenges include reliance on imported SiC fibers and lengthy automotive certifications (AEC-Q200).

The global MMC Connector market size was estimated at USD 813.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global MMC Connector market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
