### Report Overview

Metal Organic (MO) source also known as high-purity metal organic compound, is a class of chemical compounds that contain metals and organic ligands, which confer solubility in organic solvents or volatility. MO source is a key raw material for producing semiconductor microstructure materials by use of MOVCD technology. Widely used in the production of LEDs, solar cells as well as other applications.

Global MO (Metal Organic) Source manufacturers are mostly centered in China, Korea and Japan. Due to high technical barriers, the whole MO (Metal Organic) source industry is now in oligopoly and monopolistic competition. China was the leading producer of MO (Metal Organic) source, accounting for more than 37.83% of global production. According to classification, major MO Sources are trimethylgallium, trimethylindium, triethylgallium and trimethylaluminium, these kinds of MO sources, especially trimethylgallium accounts for more than 80% of the global market share in 2018. In terms of application, MO (Metal Organic) source can be used in the production of LED, solar cell, phase change memory and semiconductor laser. LED is the main application in the market, accounting for around 90% of the total consumption in 2018.
