The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mobile Aerial Work Platform competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of mobile aerial work platforms reached 45,000 units, with an average selling price of US\$35,000 per unit. Mobile aerial work platforms are devices used for working at heights, providing a safe and stable working platform, and are widely used in construction, equipment maintenance, power installation, logistics and warehousing, bridge repair, and firefighting. Based on structural type, mobile aerial work platforms mainly include scissor lifts, telescopic boom lifts, and articulated boom lifts, featuring height adjustment, high operability, and high flexibility. Platform heights typically range from 6 meters to 40 meters, with different working heights selectable according to operational needs. Upstream raw materials include steel, aluminum alloys, hydraulic systems, electronic components, tires, and batteries. Downstream customers include construction companies, maintenance service companies, rental companies, and industrial equipment maintenance companies. Global total production capacity is approximately 55,000 units per year, with an industry gross profit margin between 20% and 30%. In terms of downstream consumption, construction and equipment maintenance account for the highest proportions, at 45% and 30% respectively, while logistics and warehousing and infrastructure account for 25%. Steel, hydraulic systems, and batteries account for approximately 60% of upstream materials. With the rapid development of the global construction industry, industrial equipment maintenance, infrastructure construction, and smart logistics, the demand for aerial work platforms is gradually increasing. Especially in areas experiencing rapid urbanization, mobile aerial work platforms are being used more and more widely as an efficient alternative to traditional scaffolding. Future development directions mainly focus on platform

intelligence (such as remote control and automatic balancing systems), electrification (environmentally friendly battery platforms), safety enhancement, and all-terrain adaptability. Driven by environmental policies and the diversification of aerial work needs, the mobile aerial work platform market will continue to expand in the coming years.

The global Mobile Aerial Work Platform market size was estimated at USD 1576.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
