Abstracts

A mobile articulated boom lift, also known as a knuckle boom lift or articulated aerial work platform (AWP), is a self-propelled, versatile piece of access equipment designed to safely elevate workers, tools, and materials to elevated or hard-to-reach work areas. It features multiple hinged sections (or ?knuckles?) that articulate, allowing the platform to maneuver around obstacles and access confined spaces with greater flexibility than straight boom lifts. Powered by electric, diesel, or hybrid systems, these machines are equipped with outriggers for stability, offer varying lift heights and horizontal reach capabilities, and are commonly used across construction, maintenance, industrial, and event staging applications where precise positioning and mobility are critical.
