Abstracts

A mobile concrete placing boom is a specialized piece of construction equipment mounted on a truck chassis, designed to efficiently transport, position, and pour liquid concrete in high-rise, large-scale, or hard-to-reach construction sites. It integrates a hydraulic or articulated boom system with multiple sections, allowing precise remote-controlled placement of concrete via an attached pipeline or hose, thereby reducing labor requirements, accelerating construction timelines, and minimizing material waste and segregation. These booms are essential for modern construction projects where traditional methods like cranes and buckets are impractical, offering enhanced flexibility, reach (often exceeding 60 meters), and accuracy in concrete placement.

The global Mobile Concrete Placing Boom market size was estimated at USD 325.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
