Abstracts

Mobile Delivery Robots are mobile robotic vehicles capable of delivering small goods, mail or groceries in an autonomous and fast manner. These units, also known as last mile delivery (LMD) robots, come in different sizes, shapes and propulsion modes. The market drivers for Mobile Delivery Robots are the increasing demand for contactless and efficient service delivery amid the Covid-19 pandemic, the labor shortage and high turnover rate in the logistics industry, the rising customer expectations for personalized and innovative experiences, and the advancement of artificial intelligence and robotics technologies. The constraints of Mobile Delivery Robots are the high initial and maintenance costs, the lack of human warmth and empathy, the potential technical failures and security risks, and the ethical and social concerns regarding the displacement of human workers. The future opportunities for Mobile Delivery Robots are the development of more intuitive and empathetic robots that can provide customized and interactive services, the expansion of robot applications in different types of delivery scenarios such as rural areas, airports, or stadiums, and the creation of a competitive advantage and brand differentiation for delivery companies that adopt robots.

The global Mobile Delivery Robots market size was estimated at USD 1145.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.60% during the forecast period.
