Report Overview:

Fronthaul is associated with a new and different type of Radio Access Network (RAN) architecture consisting of centralized baseband controllers and standalone radio heads installed at remote cell sites located kilometers to tens of kilometers away. These BBU and RU functional blocks, as well as the equipment that performs these functions, are located further away from each other than in the mobile backhaul model. In the fronthaul model, the RU equipment is now referred to as a Remote Radio Head (RRH) but is still located at the cell site. The BBU is now relocated to centralized and protected location where it serves multiple RRHs. The optical links that interconnect the newly centralized BBU and the multiple RRHs is referred to as fronthaul.

The Global Mobile Fronthaul Market Size was estimated at USD 1398.18 million in 2023 and is projected to reach USD 3930.64 million by 2029, exhibiting a CAGR of 18.80% during the forecast period.
