Report Overview

Fronthaul is associated with a new and different type of Radio Access Network (RAN) architecture consisting of centralized baseband controllers and standalone radio heads installed at remote cell sites located kilometers to tens of kilometers away. These BBU and RU functional blocks, as well as the equipment that performs these functions, are located further away from each other than in the mobile backhaul model. In the fronthaul model, the RU equipment is now referred to as a Remote Radio Head (RRH) but is still located at the cell site. The BBU is now relocated to centralized and protected location where it serves multiple RRHs. The optical links that interconnect the newly centralized BBU and the multiple RRHs is referred to as fronthaul.
