## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mobile Garbage Compression Station competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of mobile garbage compression stations will reach approximately 14,100 units, with an average unit price of approximately \$23,000. These stations are core facilities for the collection, distribution, and treatment of municipal solid waste and small- and medium-sized industrial solid waste. They typically use hydraulic or electric compression systems to efficiently compress loose waste to 1/3-1/5 of its original volume. Large compression trucks or semi-trailers then transport the waste in bulk, significantly reducing transportation costs and vehicle frequency requirements. These stations are often equipped with automatic feed ports, sealed compression chambers, and leachate collection and deodorization systems to meet environmental standards and reduce secondary pollution. They are widely used in transfer hubs and large industrial parks in first- and second-tier cities. Their upstream supply primarily relies on suppliers of hydraulic systems, structural steel, automatic control modules, and environmental filtration devices, while their downstream supply serves municipal sanitation departments, solid waste treatment companies, and urban and rural waste transport operators.

The global Mobile Garbage Compression Station market size was estimated at USD 324.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
