Abstracts

A mobile hot air generator is a portable heating device that utilizes fuel combustion (typically diesel, propane, or kerosene) to produce and direct a high-volume stream of heated air, designed for temporary or on-demand heating applications in environments lacking fixed heating infrastructure; it is commonly employed in construction sites for drying materials like concrete or plaster, agricultural settings such as greenhouses or livestock barns, industrial maintenance for thawing frozen pipes or equipment, emergency response for warming enclosed spaces, and event management in outdoor or semi-enclosed venues. These units are characterized by their mobility?often mounted on wheels or trailers?and vary in thermal output capacity, fuel efficiency, and safety features such as automatic shut-off mechanisms and low-oxygen sensors to ensure operational reliability across diverse and often demanding conditions.

The global Mobile Hot Air Generators market size was estimated at USD 45.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
