Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mobile ICU competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.A Mobile ICU (Intensive Care Unit) is a highly specialized, transportable medical facility designed to provide advanced critical care services outside of traditional hospital settings. Equipped with intensive care-level medical equipment such as ventilators, cardiac monitors, defibrillators, and medication delivery systems, these units are housed in vehicles (ambulances, helicopters, or fixed-wing aircraft), trailers, or expandable structures, allowing rapid deployment to emergency sites, disaster zones, or during patient transfers. They enable continuous monitoring and treatment of critically ill or injured patients—including adults, children, and newborns—while in transit or at temporary locations. Mobile ICUs may be categorized by transport mode (vehicle-based for rapid response, trailer-based for larger, stationary setups), expandability (modular designs that can increase workspace), or specialized care focus (e.g., pediatric or neonatal units with age-specific equipment). This flexibility ensures critical care reaches patients in remote areas, during mass casualty events, or when transferring between healthcare facilities, bridging gaps in care and improving survival rates for vulnerable populations.The global market of Mobile ICU shows a trend of stable growth, with remarkable regional differences. North America and Europe have relatively mature medical systems and high - tech levels, and they have a large demand for Mobile ICU. They are important markets in the global Mobile ICU market and are expected to maintain a stable growth rate in the future. The Chinese market has developed rapidly in the past few years. Although the specific market size and proportion in 2024 are not clearly given, it is expected to occupy an important position in the global market in the future. At the same time, emerging markets such as Japan, Southeast Asia, and India

also have certain development potential. With the improvement of local medical levels and the increase in demand for emergency medical rescue, the market demand for Mobile ICU is expected to continue to rise.Mobile ICU can be classified according to transportation methods, scalability, or specialized care focus. Types such as vehicle - based, helicopter - based, and trailer - based Mobile ICU are suitable for different emergency scenarios. In terms of application fields, it is mainly used in communities, disaster response and rescue, remote and underserved communities, military and defense operations, etc. The demand in disaster - prone areas and remote areas is gradually increasing, and it plays a vital role in emergency medical rescue and patient transfer.
