Abstracts

A Mobile Intensive Care Unit (MICU) is a specialized, fully-equipped ambulance designed to provide advanced critical care during patient transport, functioning as a mobile extension of a hospital?s intensive care unit with capabilities such as mechanical ventilation, continuous hemodynamic monitoring, infusion pumps, defibrillators, and advanced life support equipment, staffed by highly trained paramedics, nurses, or physicians to stabilize and manage critically ill or injured patients en route to medical facilities. The global MICU market is experiencing steady growth, driven by rising demand for emergency medical services, increasing incidence of trauma and chronic diseases, aging populations, and advancements in mobile medical technology, with key players including ambulance manufacturers, medical device companies, and healthcare service providers focusing on innovations in telemedicine integration, lightweight equipment, and energy-efficient vehicles to enhance patient outcomes and operational efficiency.
