Abstracts

Mobile Laser Scanning (MLS) refers to the technology and systems used for rapidly capturing high-precision, three-dimensional spatial data of environments through the use of laser scanners mounted on moving platforms such as vehicles, drones, or backpacks. These systems typically integrate LiDAR (Light Detection and Ranging) sensors with inertial measurement units (IMUs), GPS, and cameras to generate dense point clouds and georeferenced imagery, enabling accurate and efficient mapping of terrain, infrastructure, and built environments. MLS is distinguished by its ability to collect data at high speeds and resolutions while in motion, making it particularly valuable for applications requiring extensive coverage and detailed spatial information without the need for stationary setups or manual measurements.

The global Mobile Laser Scanning market size was estimated at USD 980.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Mobile Laser Scanning market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
