Report Overview

The Mobile Mini C Arm is a compact, mobile fluoroscopic imaging system widely used in medical settings for real-time X-ray visualization during minimally invasive surgical and diagnostic procedures. Designed for portability, it features a C-shaped arm with an X-ray source and detector that can be maneuvered around the patient, providing high-resolution imaging for orthopedic, pain management, urology, and vascular interventions. Its smaller footprint compared to traditional C-arms makes it ideal for outpatient clinics, ambulatory surgery centers, and emergency rooms where space is limited. The system offers adjustable settings for dose optimization, digital imaging capabilities, and often includes advanced software for image enhancement and storage. Its versatility, ease of use, and cost-effectiveness have made it indispensable in modern medical practices, particularly in settings requiring quick, efficient imaging without the need for fixed installations.
