Abstracts

Mobile oxygen generators are portable medical devices that utilize pressure swing adsorption (PSA) or membrane separation technology to concentrate and deliver purified oxygen from ambient air, typically providing oxygen concentrations between 90-95%, and are designed for personal use by individuals with chronic respiratory conditions such as COPD, asthma, or pulmonary fibrosis, enabling greater mobility and independence compared to stationary oxygen concentrators or oxygen tanks. These devices are characterized by their compact size, battery-operated functionality, and lightweight design, often weighing less than 5 pounds, and are increasingly integrated with smart features such as Bluetooth connectivity for monitoring oxygen saturation levels and usage patterns via companion mobile applications, thereby enhancing patient adherence to prescribed oxygen therapy.
