Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mobile Phones SAW Filter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The SAW filter (Surface Acoustic Wave Filter) is a radio frequency device based on the piezoelectric effect. By converting electrical signals into surface acoustic waves and propagating them on the surface of a piezoelectric substrate, it achieves the screening of specific frequency signals and noise filtering. Its core structure includes: piezoelectric substrate (such as quartz, lithium niobate), transducer (IDT) : used for electro-acoustic signal conversion. In mobile phones, SAW filters are mainly used for: Rf front-end signal processing: Isolate the transmitting and receiving frequency bands to improve communication quality; Anti-interference: Suppress adjacent frequency noise to ensure the stability of calls and data transmission. Features: Small in size and low in cost, suitable for medium and low frequency bands (100MHz-3GHz), and a key component of 2G/3G/4G/5G mobile phones. Technological upgrade direction Popularization of temperature compensation technology: The proportion of TC-SAW filters will continue to increase. Japanese manufacturers have achieved high-frequency applications at 3.5GHz, and Chinese manufacturers are accelerating technological catch-up. Evolution of the market pattern The process of domestic substitution: By 2024, the domestic production rate will be approximately 10-15%. In high-frequency fields, imports will still be relied on, but the penetration rate of enterprises like Haoda Electronics in the mid-to-low-end market is accelerating. The concentration of the top players is intensifying: Murata, TDK and Taiyo Yuden hold 88% of the global market share, and among the 30 domestic manufacturers, only 4 to 5 have the ability to bid. Demand drivers Iteration of 5G Mobile phones The usage of single-machine filters has exceeded 60, driving the growth of the global mobile phone SAW filter market size. Satellite communication and

industrial Internet of Things: LEO satellite interconnection and Industry 4.0 devices have given rise to the demand for wide-temperature (-40 to 125?) and highly stable SAW filters. Challenges and Opportunities Patent risk: Foreign enterprises such as Murata suppress domestic manufacturers through patent litigation, and it is necessary to build an independent patent pool. Modularization trend: International giants enhance added value through the integration of PA+ filter modules, while domestic enterprises need to break through system-level design capabilities.

The global Mobile Phones SAW Filter market size was estimated at USD 4284.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
