Abstracts

A mobile robot bending cell refers to an automated manufacturing system that integrates robotic arms, typically mounted on mobile platforms or gantry systems, with CNC press brakes or other bending machinery to perform sheet metal bending operations with high flexibility and precision. These systems are designed to be reprogrammable and redeployable across different production lines or workstations, allowing manufacturers to adapt quickly to varying part geometries, batch sizes, and production schedules without extensive reconfiguration. Equipped with advanced sensors, vision systems, and end-of-arm tooling, these cells can handle tasks such as part loading, positioning, bending, and unloading, often operating collaboratively with human workers or other automation equipment in a smart factory environment. The mobility aspect enhances their utility in dynamic production layouts, reducing downtime and increasing overall equipment effectiveness while supporting just-in-time manufacturing and high-mix, low-volume production paradigms.

The global Mobile Robot Bending Cell market size was estimated at USD 550.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
