## Abstracts

The Mobile Shore Power Connection System is a comprehensive solution that is flexible and easy to move and quickly deploy in different locations to achieve power connection and transmission between port shore-based power supplies and berthed ships. This system breaks the location limitations of traditional fixed shore power facilities and can quickly adjust the installation location and complete power docking based on the specific location of the ship's berthing, the layout characteristics of different ports, and diverse power needs. It usually consists of multiple parts such as mobile power supply equipment, cable retraction and release devices, connecting plugs and sockets, electrical control systems, and safety protection devices. Through the coordinated work of various parts, it provides ships with a stable and reliable power supply, helping ships reduce fuel consumption and pollutant emissions while at port, and achieving green shipping.

The global Mobile Shore Power Connection System market size was estimated at USD 645.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
