## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mobile Ventilation Dryer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mobile ventilated dryers are portable drying equipment integrating fans, heating systems, and control modules. They achieve efficient dehydration of materials through forced ventilation and hot air circulation, and are widely used for flexible drying operations in fields, warehouses, and processing sites. Their structure is typically mounted on trailers or chassis, with wheeled trailer or forklift pallet mobility, suitable for rapid deployment and temporary drying needs in various scenarios. The product is priced at approximately US\$5,400 per unit, with global sales of approximately 60,000 units. The upstream of the mobile ventilated dryer industry chain includes heating source equipment (such as electric heating elements, burners, and hot air furnaces), fan manufacturers (airflow range 5,000-30,000 m<sup>3</sup>/h), and control system manufacturers (such as PLCs and temperature and humidity sensors); the downstream encompasses agricultural cooperatives, grain storage units, food dehydration plants, traditional Chinese medicine processing enterprises, and emergency material supply organizations. This equipment is developing towards lightweighting, intelligence, and multi-energy compatibility, gradually achieving linkage with drying towers or storage systems, while simultaneously promoting the integrated application of remote monitoring and energy consumption optimization algorithms. The overall gross profit margin remains between 35% and 45%, demonstrating strong profitability and potential for technological upgrades.

The global Mobile Ventilation Dryer market size was estimated at USD 322.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50%

during the forecast period.
