Abstracts

Mobile working platforms, often referred to as mobile elevated work platforms (MEWPs), are self-propelled or manually propelled aerial work platforms designed to provide temporary access for personnel, tools, and materials to elevated work areas, typically ranging from several feet to over 100 feet in height. These versatile machines include various types such as scissor lifts, boom lifts (articulating and telescopic), vertical mast lifts, and trailer-mounted models, equipped with features like electric, diesel, or hybrid power options, non-marking tires for indoor use, rough-terrain capabilities for outdoor applications, and advanced safety systems including platform overload sensors, tilt alarms, and emergency descent mechanisms. They are engineered to enhance productivity and safety across a broad spectrum of industries?including construction, maintenance, warehousing, manufacturing, film production, and event staging?by replacing less stable alternatives like ladders or scaffolding, thereby reducing the risk of falls and improving operational efficiency in tasks such as installation, repair, inspection, painting, and lighting work.

The global Mobile Working Platforms market size was estimated at USD 4750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
