Abstracts

A mobile phone USB flash disk is a portable data storage device designed specifically for use with smartphones and tablets, featuring a dual-interface design that typically includes a standard USB-A or USB-C connector on one end and a micro-USB, USB-C, or Lightning connector on the other, enabling direct data transfer between mobile devices and computers without reliance on internet connectivity or cloud services. These devices serve as physical intermediaries for storing, backing up, and transferring files such as photos, videos, documents, and applications, and often include companion mobile apps that facilitate file management, automatic backups, and encryption for security.
