Abstracts

Modbus communication modules are industrial-grade hardware devices that implement the Modbus protocol—a widely adopted serial communication protocol originally developed by Modicon (now Schneider Electric) for use with programmable logic controllers (PLCs). These modules serve as interfaces that enable data exchange between industrial electronic devices such as sensors, actuators, controllers, and supervisory systems, supporting both wired (RS-485, RS-232, Ethernet) and wireless transmission methods. Designed for reliability, interoperability, and simplicity in harsh environments, Modbus modules facilitate real-time monitoring and control in applications ranging from manufacturing automation and building management to energy distribution and process control, forming a foundational component in industrial Internet of Things (IIoT) and operational technology (OT) networks.

The global Modbus Communication Module market size was estimated at USD 172.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
