Report Overview

The mode-locked laser optical frequency comb is a special spectrum produced by mode-locked laser technology. Mode-locked lasers can produce ultra-short optical pulses that have an extremely high repetition frequency in time, and the time intervals between adjacent pulses are exactly the same. In the frequency domain, these pulses appear as a series of equally spaced frequency comb teeth, similar in shape to a comb, hence the name optical frequency comb. Optical frequency comb plays an important role in optical frequency measurement, just like a ruler or timer with a precise scale, enabling extremely precise optical frequency measurement.

The global Mode-locked Laser Frequency Comb market size was estimated at USD 328 million in 2023 and is projected to reach USD 503.04 million by 2030, exhibiting a CAGR of 6.30% during the forecast period.
