Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Model Aircraft competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Model aircraft are divided into two types: aviation models and aerospace models. Aerospace models are various model spacecrafts that can be launched into space and are designed and manufactured based on the principles of spacecraft, including various model rockets and rocket-propelled model aircraft. The aircraft models mentioned in this article refer specifically to aviation models and do not include static die-cast model aircraft. The consumer group of toy-grade model aircraft is mainly ordinary consumers, emphasizing the fun and entertainment of model aircraft, reducing the requirements for the competitiveness and functionality of model aircraft, and belongs to the category of remote control toys. Remote control toys refer to electronic toys that can be remotely controlled by radio remote controllers. Professional-grade model aircraft originated from model aircraft sports. Since the appearance of the first aircraft, competitive sports with various aviation flights as the main content have gradually emerged, including model aircraft sports. The professional-grade model aircraft product market is mainly composed of amateurs and professional model aircraft athletes. Model aircraft market consumers are mainly divided into three categories: children, youth and adults. Among them, children's model aircraft consumers have higher requirements for product quality and innovation. Therefore, model aircraft manufacturers need to fully consider the needs of children during the design and manufacturing process. Youth and adult model aircraft consumers have higher requirements for product performance and playability. These consumers tend to focus on factors such as the flight performance, controllability, playability and quality of model aircraft. Therefore, model aircraft manufacturers need to launch high-performance and high-quality model aircraft products for this group. In

addition, with the rapid development of the drone market, drone model aircraft has gradually become an emerging market segment in the model aircraft market, and is expected to occupy a certain market share in the future.

The global Model Aircraft market size was estimated at USD 219.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
