### Report Overview

Model based development (MBD) is a software development methodology based on V-cycle. The model based approach enables a developer to simulate the models for the complex control processes. These software models can be tested to assess the performance in real-time.

Model-based development is a design and development method that models, simulates, and then verifies controls and controlled objects that make up systems. Through model-based development, verification can be done during the design process, which reduces rework in the verification process, thereby significantly reducing development hours and improving quality. Model-based development methods are used not only in the design process but also in the verification process. By modeling the verification environment, various types of verification can be performed.

Currently, model-based development is being used in a variety of products. It has been implemented mainly in the development of in-vehicle systems but is also being used in a wide range of other fields such as medical equipment and robotics. It is expected to be introduced in a variety of fields in the future.
