Abstracts

Model based development (MBD) is a development methodology based on V-cycle. The model based approach enables a developer to simulate the models for the complex control processes. These software models can be tested to assess the performance in real-time. **Time and Cost Efficiency:** Implementing MBPD significantly reduces the product development cycle time by enabling parallel design processes, minimizing the need for physical prototypes, and streamlining collaboration among multidisciplinary teams. This translates into cost savings and faster time-to-market. **Digital Twin Technology:** The rise of digital twin technology, where a virtual model of a product is synchronized with the physical product, boosts the adoption of MBPD for real-time monitoring, performance optimization, and predictive maintenance. **IoT and Connectivity Integration:** Integration with the Internet of Things (IoT) and connected devices requires a comprehensive digital model of the product. MBPD supports the development of such models, ensuring seamless integration and functionality of IoT components.

The global Model-Based Product Development market size was estimated at USD 3256.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.40% during the forecast period.
