## Abstracts

Model-layer AI Agents in Customer Service refers to agentic customer service capabilities implemented at the model/foundation layer rather than as fully packaged, end-user-facing applications. These offerings are typically delivered by cloud providers, model vendors, or leading CCaaS/CRM platforms and exposed via APIs, agent frameworks, and dialogue-orchestration runtimes. They encapsulate generic building blocks?intent understanding, multi-turn dialogue state, tool and connector orchestration, short- and long-term memory, policy and safety controls, and sometimes service-specific reasoning?which downstream builders can compose into their own branded, scenario-specific customer service agents. Compared with application-layer AI agents that directly serve contact centers or business units, model-layer agents focus on generality, composability and multi-tenant scale, with business models that are predominantly usage- and subscription-based and structurally higher gross margins than project-based application delivery.

The global Model-layer AI Agents in Customer Service market size was estimated at USD 827.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 32.70% during the forecast period.
