### **Report Overview**

Modified Atmosphere Packaging (MAP) machines are packaging systems used to create a controlled atmosphere within a package or container to extend the shelf life and preserve the quality of perishable products. These machines utilize gas flushing techniques to replace the air inside the package with a modified gas mixture that consists of specific proportions of oxygen, nitrogen, or carbon dioxide. By altering the gas composition, MAP machines can slow down the growth of bacteria, inhibit oxidation, and preserve the freshness of food, pharmaceuticals, and other sensitive products. MAP machines are widely used in the food industry to maintain product quality, increase shelf life, and reduce food waste.
